Clearer tints... the printer's need

AND THE INKMAKER'S OPPORTUNITY

● "Give us clearer, better printing colored inks", printers demand nowadays. This popular need is the inkmaker's opportunity. By using Titanox-B (barium base) you can produce colored inks with excellent tonal values... Titanox-B has fine particle size, high opacity, unusual brightness. Since it is chemically stable and inert, Titanox-B will not react with other ingredients in the ink or in printing processes and thereby cause discoloration or muddiness. The exceptional hiding power of Titanox-B (50 to 100% higher than other commonly used pigments) also helps eliminate the dangers arising from excessive pigmentation, such as dull gloss and poor adhesion... Let us cooperate with you in adapting Titanox-B to your formulas. Full information is yours for the asking. Write today.

TITANOX

TITANIUM PIGMENT CO., INC.

Manufacturers of TITANOX-B (Barium Base)

TITANOX-C (Calcium Base)...PURE TITANIUM OXIDE

111 Broadway, New York, N. Y.; Carondelet Station, St. Louis, Mo.; Pacific Coast Distributor: National Lead Co. of California, 2240 Twenty-Fourth St., San Francisco.
