MATERIAL SAFETY DATA SHEET

SECTION I							
MANUFACTURER'S NAME MONSANTO COMPANY				EMERGENCY TELEPHONE NO. (314) 604-1000			
ADDRESS (Name, Street, City, State, and ZIP Code) 800 North Lindbergh Boulevard, St. Louis, Missouri 63166							
CHEMICAL NAME AND SYNONYMS Mixture			TRADE NAME AND SYNONYMS Aroclor 1248				
CLASSIFICATION Chlorinated aromatic			FORMULA Mixture				
SECTION II HAZARDOUS INGREDIENTS							
PAINTS, PRESERVATIVES & SOLVENTS		4	TLV (Usual)	ALLOYS AND METALLIC COATINGS		5	TLV (Usual)
Pigments				Base Metal			
Catalyst				Alloys			
Vehicle				Metallic Coatings			
Solvents				Filled Metal Plus Coating or Core Plus			
Additives				Others			
Others							
HAZARDOUS MIXTURES OF OTHER LIQUIDS, SOLIDS, OR GASES						6	TLV (Usual)
SECTION III PHYSICAL DATA							
BOILING POINT (°F)		760 mm 345-385°C		SPECIFIC GRAVITY H ₂ O @ 25/25°C		1.445	
VAPOR PRESSURE (mm Hg)		165-210°C 3 mm		PERCENT VOLATILE BY VOLUME (%)		N.A.	
VAPOR DENSITY (AIR = 1)		Not Avail		EVAPORATION RATE (BuAc = 1)		<1	
SOLUBILITY IN WATER		20°C negligible		K _{OW} 0.15			
APPEARANCE AND ODOR		colorless to yellow oil strong odor					
SECTION IV FIRE AND EXPLOSION HAZARD DATA							
FLASH POINT (USCGC METHOD)		C.O.C. 196°C		FLAMMABLE LIMITS		LFL UFL	
EXTINGUISHING MEDIA							
SPECIAL FIRE FIGHTING PROCEDURES Respiratory protection when fighting fires where exposure to vapor or gases is possible:							
ADDITIONAL FIRE AND EXPLOSION HAZARDS Highly toxic fumes (chlorides and chlorine) can be evolved in fires of this product.

Aroclor 1221

SECTION V

HEALTH HAZARD DATA

HEALTH HAZARD DATA	Not Available
EFFECTS OF OVEREXPOSURE Skin irritation in the form of chloracne, systematic intoxication leads to nausea, vomiting, loss of weight, edema and abdominal pain.	
EMERGENCY AND FIRST AID PROCEDURES Remove from exposure. Remove contaminated clothing. Wash contacted area with large amounts of water and soap. Refer to physician.	

SECTION VI

REACTIVITY DATA

STABILITY	UNSTABLE		STABILITY TO AVOID
	STABLE	X	
INCOMPATIBILITY (Reagents to avoid)			
HAZARDOUS DECOMPOSITION PRODUCTS CO, CO ₂ , smoke, soot, chlorides and chlorine			
HAZARDOUS POLYMERIZATION	MAY OCCUR		CONDITIONS TO AVOID
	WILL NOT OCCUR	X	

SECTION VII

SPILL OR LEAK PROCEDURES

SPILL OR LEAK PROCEDURES Absorb on clay, sawdust or other absorbent material. Place in drums. Bury in approved chemical landfill in accordance with local and state regulations.	
Burn in an approved incinerator in accordance with local and state regulations.	

SECTION VIII

SPECIAL PROTECTION INFORMATION

RESPIRATORY PROTECTION INFORMATION Bureau of Mines approved respirator for organic vapors.			
VENTILATION	LOCAL EXHAUST	Yes - for vapors	SPECIAL VAPORS
	MECHANICAL (General)		OTHER
PROTECTIVE GLOVES		rubber	EYE PROTECTION
			chemical goggles
OTHER PROTECTIVE EQUIPMENT			

SECTION IX

SPECIAL PRECAUTIONS

SPECIAL PRECAUTIONS Avoid skin and eye contact. Avoid inhalation of vapors.	
OTHER PRECAUTIONS	

PRR 002801

While the information and recommendations set forth herein are believed to be accurate as of the date hereof, MONSANTO COMPANY MAKES NO WARRANTY WITH RESPECT THERETO AND DISCLAIMS ALL LIABILITY FROM RELIANCE THEREON.

Monsanto MATERIAL SAFETY DATA

PAGE 2 OF 4

OCCUPATIONAL CONTROL PROCEDURES

Inhalation—Workplace exposure should be maintained below the OSHA eight-hour, time-weighted average Threshold Limit Value (TLV). At room temperatures, the hazard of inhalation is considered slight or absent. Chemical cartridge respirators or gas masks approved for protection against organic vapors are recommended in the event of spills or leaks of hot fluids. These will provide good protection up to the concentrations shown on the approval labels and the odor will give ample warning if it comes through the device. Self-contained breathing apparatus should be worn when PCB's are encountered in an enclosed space.

Threshold Limit Value (TLV)—Chlorodiphenyl (42% chlorine) 1.0 mg/cu.m.
Chlorodiphenyl (54% chlorine) 0.5 mg/cu.m.

Skin Contact—Avoid prolonged or repeated skin contact. Where employees may come into direct contact with PCB's, protective clothing impervious to PCB's should be worn. Gloves, boots, overshoes and bio-haz aprons that cover the boot tops should be used when necessary. This protective equipment should be regularly inspected for defects and to ensure that it is in clean and satisfactory working condition. Contaminated clothing, gloves, etc., should be disposed of as prescribed by regulations.

Eye Contact—Eye protection should be used where there is a possibility of liquid splashes.

Ingestion—Ingestion of these materials is generally not a problem in industry.

PHYSIOLOGICAL EFFECTS SUMMARY:

Skin Contact—Can be absorbed through intact skin. Local action on skin is similar to that of common organic solvents where contact leads to removal of natural fats and oils with subsequent drying and cracking of the skin. A potential exists for the contracting of chloracne.

Eye Contact—The liquid products and their vapors are moderately irritating to eye tissues.

Ingestion—The acute oral toxicities of the undiluted compounds are: LD₅₀ rats—8.65 g/mkg for 42% chlorinated, and 11.9 g/mkg for 54% chlorinated—"slightly toxic."

Inhalation—Animal experiments of varying duration and at different air concentrations show that for similar exposure conditions, the 54% chlorinated material produces more liver injury than the 42% chlorinated material.

Other—There are literature reports that PCB's can impair reproduction function in monkeys. A study reported in the literature with female rats using Aroclor® 1260 stated that Aroclor 1260 caused liver cancers. Monsanto sponsored animal feeding studies of Aroclor 1242, 1254 and 1260. These compounds, fed to both sexes of rats, did not produce cancers. The National Cancer Institute performed a study in 1977, using Aroclor 1254 with both sexes of rats. NCI stated that the PCB, Aroclor 1254 was not carcinogenic under the conditions of their bioassay.

The consistent finding in animal studies with PCB's is that they produce liver injury following prolonged and repeated exposure by any route, if the exposure is of sufficient degree and duration. Liver injury is produced first, and by exposures that are less than that alleged to cause cancer in rodents. Therefore, exposure by all routes should be kept sufficiently low to prevent liver injury.

FIRE PROTECTION INFORMATION

Fire and Explosion—Chlorodiphenyls are essentially non-combustible compounds. They may decompose to form CO, CO₂, HCl, phenolics and aldehydes under severe conditions such as exposure to flame or hot surfaces. No phosgene is formed.

A 0009410

Monsanto MATERIAL SAFETY DATA

FIRE PROTECTION INFORMATION

Page 3 of 6

Fire and

Explosion: PCBs are fire-resistant compounds. They may decompose to form CO, CO₂, HCl, phenolics, aldehydes and other toxic combustion products under severe conditions such as exposure to flame or hot surfaces.

At temperatures in the range of 600-650°C in the presence of excess oxygen PCBs may form polychlorinated dibenzofurans (PCDFs). Laboratory studies under similar conditions have demonstrated that PCBs do not produce polychlorinated dibenzo-p-dioxins (PCDDs).

PCBs in electrical equipment have been reported to produce both chlorinated dioxins (PCDDs) and furans (PCDFs) during fire situations. These combustion products may result all, or in part, from non-PCB components of the dielectric fluids or other combusted materials. Consult the equipment manufacturer for information regarding composition of the dielectric fluids in electrical apparatus.

Standard fire fighting wearing apparel and self-contained breathing apparatus should be worn when fighting fires that involve possible exposure to chemical combustion products. Fire fighting equipment should be thoroughly cleaned and decontaminated after use.

If a PCB transformer is involved in a fire-related incident, the owner of the transformer may be required to report the incident. Consult and follow appropriate federal, state, and local regulations.

REACTIVITY DATA

PCBs are very stable, fire-resistant compounds.

HEALTH EFFECTS SUMMARY

Skin Contact: PCBs can be absorbed through intact skin. Local action on skin is similar to that of common organic solvents where contact leads to removal of natural fats and oils with subsequent drying and cracking of the skin. A potential exists for the contracting of chloracne.

Eye Contact: The liquid products and their vapors are moderately irritating to eye tissues.

Ingestion: The acute oral toxicities of the undiluted compounds are: LD₅₀ rats—8.65 gm/kg for 42% chlorinated, and 11.9 gm/kg for 54% chlorinated—"slightly toxic."

Inhalation: Animal experiments of varying duration and at different air concentrations show that for similar exposure conditions, the 54% chlorinated material produces more liver injury than the 42% chlorinated material.

Other: There are literature reports that PCBs can impair reproductive functions in monkeys. A study reported in the literature with female rats using Aroclor® 1260 stated that Aroclor 1260 caused liver cancers. Monsanto sponsored animal feeding studies of Aroclor 1242, 1254 and 1260. These compounds, fed to both sexes of rats, did not produce cancers. The National Cancer Institute performed a study in 1977 using Aroclor 1254 with both sexes of rats. NCI stated that the PCB, Aroclor 1254, was not carcinogenic under the conditions of their bioassay.

REACTIVITY DATA

PCB's are very stable, fire-resistant compounds.

SPILL, LEAK & DISPOSAL INFORMATION

If PCB's leak or are spilled, the following steps should be taken immediately:

All non-essential personnel should leave the leak or spill area.

The area should be adequately ventilated to prevent the accumulation of vapors.

The spill/leak should be contained. Loss to sewer systems, navigable waterways and streams should be prevented. Spill/leaks should be removed promptly by means of absorptive material, such as sawdust, vermiculite, dry sand, clay, dirt or other similar materials, or trapped and removed by pumping or other suitable means (traps, drip-pans, trays, etc.).

Personnel entering the spill or leak area should be furnished with appropriate personal protective equipment and clothing as needed.

Personnel trained in the emergency procedures and protected against the attendant hazards should shut off sources of PCB's, clean up spills, control and repair leaks and fight fires in PCB areas.

All wastes and residues containing PCB's (e.g., wiping cloths, absorbent material, used disposable protective gloves, clothing, etc.) should be collected, placed in proper containers, marked and disposed of in the manner prescribed by EPA regulations (40 CFR 761).

Various federal and state regulations may require reporting of PCB spills. Consult your attorney or appropriate regulatory officials for information relating to spill reporting.

PRR 002818

A 0009413

Monsanto

FROM: NAME & LOCATION: St. Louis - General Office

DATE: March 17, 1969
SUBJECT: REGIONAL WATER QUALITY
CONTROL BOARD
REFERENCE: Their letter to you of March 7
from Mr. Fred M. Dierker
TO: H. S. Bergen - HBERG

cc

About Aroclor used in the dielectric area, we respond to items 4, 5, 6, and 7 of Mr. Dierker's letter as follows:

- 4) The solubility of Aroclor in tap water at 25°C. is as follows:

<u>Product</u>	<u>Solubility in Water</u>
Aroclor 1242	203 ± 10 ppm
Aroclor 1248	106 ± 14 ppm
Aroclor 1254	50 ± 2 ppm

Although the solubility of Aroclor 1260 has not been determined, the above data certainly serves to indicate that the more highly chlorinated Aroclors such as 1260 are the least soluble in water. Accordingly, it is quite reasonable to say that the solubility of Aroclor 1260 in water would be significantly lower than 50 ppm.

- 5) Aroclor 1242 and a small amount of Aroclor 1254 are used in hermetically sealed capacitors. The hermetically sealed can construction is of aluminum, mild steel, and stainless steel. These capacitors are used imbedded in asphalt in fluorescent lighting systems. They are used for power factor correction on utility lines. They are also used as motor run capacitors for air conditioning systems.

Attached are the specifications for Aroclors 1242, 1254, 1248, and 1260, which describes the physical properties of these materials.

Aroclor 1260, and to a lesser extent Aroclors 1242 and 1254, are used as components in transformer fluids of the askarel type. In general, the amount of Aroclor used in the transformers fluid ranges from 45 percent to 60 percent.

PRR 004869

10 NOV 11 69

A 0009415

March 17, 1969

On the West Coast in 1968, about 300,000 pounds of Aroclor was contained in the transformer askarel fluid used in that region to make transformers.

These askarel transformers are also hermetically sealed, non-breathing apparatus. Very little of the fluid is used to replace spent fluid. Askarel transformer failure that would require replacement of the fluid is very rare. For example, the Edison Electric Institute found that the incident of such failure is in the range of 0.05 percent.

6) No Aroclor capacitors are made on the West Coast.

Transformer manufacturers on the West Coast who handle Aroclor containing fluid include:

Federal Pacific - Santa Clara, California
Hill Magnetics - Redwood City, California
H. K. Porter - Bellmont, California
Sierra Transformer - Redwood City, California
Spokane Transformer - Spokane, Washington

7) In the normal use of capacitor or transformer fluid containing Aroclor, Monsanto advises the capacitor and transformer manufacturers to avoid breathing vapors that would be emitted from the fluid if it were heated to elevated temperatures. Monsanto also advises the user of the fluids to avoid continuous contact with the skin. If clothing becomes saturated, the workman is advised to launder it before wearing it again. If there has been spillage on the skin, it should be removed by washing with soap and water. Normal, ordinary good housekeeping practice is recommended.

Normal filtration of the fluid as done in the electrical industry has not presented health hazard provided that ordinary normal cleanliness is followed.
