

Drum-In-Rotor (Drum-In-Hat) Parking Brakes**Drum In Rotor Brake Assembly**

Item	Description	Item	Description
1	Drum-In-Rotor Brake Shoes	2	Drum Surface Inside the Rotor

- Drum-in-rotor parking brakes operate similarly to drum brake parking brakes.
- A small pair of brake shoes are mounted to the rotor splash shield. When activated, these shoes are pressed against the inside diameter of the rotor mounting flange.
- Drum-in-Rotor parking brakes require two separate adjustments; the cables and linkages and the parking brake shoes. The parking brake shoes must be adjusted BEFORE the cables and linkages are adjusted.
