*It seems to me
quite in issue as
being made of Aroclor
- what about all the
other chlorinated aromatics
or other products that
can cause chick
edema?
HSE*

I have just been told by FDA that Odell at the University of Oklahoma will have an article in the Journal of Poultry Science on the Aroclor 1242. He will report that when Aroclor 1242 was used in a paint in chicken coops, the chick edema was noted.
