RE: Hearing Protection Areas Are Now Redefined

Effective immediately, some areas of Chlor-Alkali II will not require hearing protection to be worn.

The areas that require hearing protection are bordered by a painted yellow hearing protection required boundary line. These areas are:

1. MC-520 (freon compressor) in Liquefaction - inside the boundary requires hearing protection.
2. Chlorine compressor deck.
3. Entire Caustic area.
4. Entire Power area including the Cell rectifiers.

All other areas of the plant do not require ear protection.
