SUBJECT CALSILITE - NON-ASBESTOS MEETING: JUNE 14, 1971

Refer to your letter of 6/15/71 covering the points discussed in our meeting of June 14. There are two points requiring clarification:

1. We outlined in our letter of May 10, 1971, (copy attached) what we felt was a reasonable number of applications which would be desirable before making the decision to proceed with the non-asbestos product. I do not feel we should obtain one test installation at 1,000°F and then stop. In the limited time between now and September 1, 1971, we should get as much field experience as possible. The more jobs located and installed at all temperature ranges in the next several weeks, the better equipped we will all be when the moment of decision arrives.

2. The reference to Du Pont's process in item #5 referred to an entirely different matter involving a Du Pont method for manufacturing a new insulation product which we are investigating. It had no reference to Calsilite SS.
