APR 5 - 1988

Attention: Dr. Robert Hinderer

Dear Sir:

As mentioned during our telephone conversation this morning, I attach Appendix A, related to Ontario Ministry of the Environment's revision of their air regulations. I also attach a copy of Table I from their discussion paper that outlines how LAER (Lowest Achievable Emission Rate) or BACT (Best Available Control Technology) will be determined. It would be very important whether VCM is classed as "LAER" because of future control and monitoring requirements.

Please try to fill in the necessary information in each area, so that B.F. Goodrich can comment during the "public comment" period if requirements are too onerous.

I would appreciate classification of VCM, D.O.P. Ethyl and Methyl Acrylate, and Trichloroethylene.

Finally, please send the literature back when you are through, as it is the only copy available.

Please call me if you need additional information.

Yours truly,

Carl
