Mon Santo Corporation
Star Route, Box 250
Guntersville, Alabama 35976

ATTENTION: Mr. C. M. Bran
Plant Manager

REFERENCE: Our File No. S-9065-75

Dear Mr. Bran:

This law firm represents General Electric Company in litigation that arose out of a pyranol spill in December, 1974. General Electric indicates that pyranol is the name they use to describe a polychlorinated biphenal solvent used as an insulating solution in certain transformers which they fill.

In order to better understand the case in which we are involved, we obviously need to obtain as much background information about polychlorinated biphenals, their affect on the environment, on humans, etc., as possible. If you have any information regarding polychlorinated biphenals, any tests that you have made with regard to the environmental hazard or any other hazard of such compound, would you please send such information to us at your earliest possible convenience. We will be happy to reimburse you for any expense occasioned by the delivery of such materials.

With appreciation, I am

Yours truly,

SIMMONS & TORBERT
