Dr. Francis C. Frary
Aluminum Research Laboratories
Aluminum Company of America
New Kensington, Pa.

Dear Dr. Frary:

I presume that you have heard the good news from Ontario. Mr. Stovel wrote me that they had passed a resolution at their meeting which would permit us to proceed with our program and that he was writing all those concerned to that effect. You above all others have been concerned and I am grateful to you for your assistance.

I have been checking up on our experimental work preliminary to publication of a long series dating back to 1937. I am impressed with the good results we have obtained by injecting either colloidal or powdered precipitated aluminum hydroxide. I believe we should verify these injection experiments by one based on inhalation. To do it we shouldneed perhaps 50 pounds of the precipitated hydrate. We have been preparing it here in the laboratory in small quantities by treating aluminum chloride with amonium hydroxide, allowing the percipitate to dry and grinding it in a mortor. However we are not equipped to carry on large scale production.

I am writing you to learn whether it might be possible to obtain this product in quantity? I do not know who her priorities are involved and I do not know whether your company even produces aluminum hydrate, but any advise or help you might give me would be most appreciated.

Sincerely yours,

Leroy U. Gardner, M.D.
Director
