Dear Wilbur,

Your letter of February 15, 1972, regarding product information about our Kaylo materials, addressed to our Chembest Division in Bloomington, Ill., has been forwarded to me for reply.

These materials are hydrated calcium silicates containing about 15% asbestos, and less than 1% free SiO_2. These tests are conducted by our own OCF laboratories, as well as some work of an I.H. nature, carried out by G. D. Clayton and Associates, whom, I'm sure you realize, has used valid as well as reliable testing methods.

Some of this data is of a propriatory nature, and at the same time, will not add to the information you require for proper protection of your personnel.

If we may be of any further service to you, please don't hesitate to contact us.

Sincerely,

G. E. Devitt

Gerald E. Devitt,
