

AROCLOR

DEPT 246

September 9, 1967

Welcome to the Aroclor Department, where eighteen men are employed by Monsanto to produce millions of pounds of product each year. Aroclor is unique. Nothing else is quite like it. It is an oily liquid, clear, non-drying, non-corrosive, fire-resistant (and sticky). Specifications are narrow and strict. High quality is demanded by our customers, and they receive it.

We began operations 31 years ago, but in all probability you have never heard of Aroclor or its uses. Mainly this is because it is sold in bulk to manufacturers who blend it with other chemicals to make many items used by you in your home, or in your car.

Here are some uses of Aroclor.

- Transformers for Electrical Power to Homes
- Capacitors for Air Conditioner Motors
- Plastics
- Lacquers
- Paints
- Waxes
- Hydraulic Systems
- Insecticides
- Adhesives
- Pigments
- Heat Transfer Fluids
- Ballast on Fluorescent Lights
- Carbonless Carbon Paper
