P. O. Box 2027
Tyler, Texas 75701

ATTN: Mr. John Warner, President

Sir:

We have received your latest progress report, dated March 24, 1976, relating to citation #S3054-43 issued on July 6, 1973. After reviewing this report and previously submitted reports, we would like to advise you of our actions as follows:

1. The citation is being amended to show a final abatement date of December 31, 1977, for item #2 relating to the engineering or administrative control of silica-contaminating dust. This date reflects the scheduled completion date of your dust control plan.

You are required to post the amendment to the citation and notification of penalty in the same manner as the original citation (until the violation has been abated, or for three (3) working days, whichever is later).

The period for contest (15 working days) of the amended portions of the citation and notification of penalty will begin from the date of receipt of that document.

If you have any questions concerning the above, please let us know.

Sincerely,

L. A. WARREN
Area Director
Dallas/Fort Worth Area Office

ATTN: Mr. Charles Kuenemann,
Safety Engineer

Sir:

Results of air samples taken in your plant at 456 Department are as listed on the attached sheet.

Realizing that your company is still in the contingency phase of engineering controls, it is recommended that further consideration be given to other changes which might be made around the sand slinger to reduce air contaminants still in excess of TLV. Hopefully, this can be accomplished to such levels that need for respirators will be eliminated.

If we may be of further assistance, please let us know.

Sincerely,

L. A. WARREN
