New Orleans, Louisiana 70112

Dear George:

In our brief conversation at the American Industrial Hygiene Association meeting in Detroit you mentioned some animal experiments indicating animals exposed to high concentrations of vinyl chloride developed higher incidence of cancer than did control animals. As I recall, you said the data might be presented at the American Cancer meetings in Houston.

I would appreciate it if you could give me any additional information on this subject. Did you manage to attend the meeting in Houston and hear the paper on this?

I was sorry we did not have more time to talk about the problems associated with vinyl chloride, and hope we may do so at our next meeting.

Best personal regards.

Very truly yours,

RH
