16 March 1981

Mr. Lou Murino
Cyprus Industrial Minerals
555 South Flower Street
Los Angeles, California 90071

Dear Mr. Murino:

I have completed my asbestos analysis of a sample of Cyprus Monoblend Talc Lot #110865, submitted with K. Lehman's letter of 13 January 1981.

The sample was analyzed with the transmission electron microscope (TEM) and electron diffraction. The sample contained chrysotile asbestos at a level less than 0.1% by weight. The chrysotile was identified by its electron diffraction pattern.

Thank you for consulting McCrone Associates. Please contact us if you have any questions.

Sincerely,

Richard M. Ellis, Jr.
Research Microscopist

25 February 1983

Mr. Keith B. Lehman
Cyprus Industrial Minerals Company
651 Metuchen Road
South Plainfield, New Jersey 07080

Dear Mr. Lehman:

I have completed my asbestos analysis on a talc sample labeled "Monoblend", Lot 1120965A RM3833 and submitted under your purchase order #45079.

The sample was examined with the transmission electron microscope. The sample contained no detectable asbestos. The limit of detection for the method is approximately 0.1% per weight of asbestos.

Thank you for consulting McCrone Associates, please contact me if you have any questions.

Sincerely,

Richard M. Ellis, Jr.
