Services of Supply
OFFICE OF THE SURGEON GENERAL
WASHINGTON

September 5, 1942

Dr. Robert A. Kehoe,
University of Cincinnati,
Kettering Laboratory of Applied Physiology,
Cincinnati, Ohio.

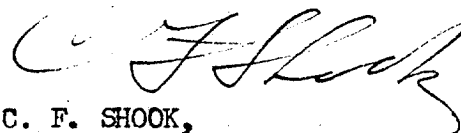

Dear Dr. Kehoe:

Receipt is acknowledged of your very kind letter of September 3, 1942, in which you discussed in some detail your research work upon the use of lined lead tubes.

This office has realized that the subject matter would be slow in research since time only will tell what absorption many of the drugs would have. Should your office develop anything new that would be of interest to the War Department in its packaging of ointments, same would be appreciated.

Thanking you for your interest, I am

Very truly yours,

C. F. SHOOK,
Colonel, Medical Corps.
