LONDON. E.C.3.

7th. November, 1938.

No. 26/38.

My dear Bevan,

COMPRETHYL

This will confirm our telephone conversation of this morning.

I have received a telegram indicating that, according to Amsterdam laboratory results, Comprethyl consists of about 15% tetra ethyl lead, about 40% bromo-ethylene, about 7% pyridine-bases, also a chloro or some chloro compounds which have not yet been determined, and some hydrocarbons. Complete results of the analysis will be forwarded to me this week and I will immediately pass them on to you.

Yours sincerely

(Signed) W. Hill.
