A COMPLETE LINE OF WELDING FITTINGS AND FLANGES FOR ALL PROCESS PIPING

B&W's Welding Fittings operations are completely integrated with the Division's facilities for research, development and product quality control as well as steel and tube making. This means you get 1) complete quality control at every step from melt to the finished product, 2) a complete process piping package from one source... job-matched to end-use service, 3) more effective control of specifying and buying thru one-source delivery, and 4) on-time deliveries... integration permits flexible production schedules, particularly in the specialized steels.

Most Complete Line Tube Turns pioneered the development and use of butt-welding fittings in the U.S. more than 30 years ago and today offers the world's most complete line of welding fittings and flanges. More than 12,000 items are produced by Tube Turns under exacting quality control standards, conforming in every respect to ASA, ASTM and MSS codes and specifications.

TUBE-TURN Welding Fittings TUBE-TURN welding fittings are available in sizes ½" thru 42", in all types, in all wall thicknesses from Schedule 5S thru 160 and XX Strong and in all piping materials, including carbon steels and wrought iron, stainless steels, intermediate alloy steels, nickel and nickel alloys, aluminum and aluminum alloys, copper and copper alloys, and others.

A full line of uniform-wall light weight butt-welding fittings is furnished in both carbon steel and stainless steels for non-critical service. Carbon steel fittings match Schedule 10 or API 5L pipe, and stainless steel fittings are Schedule 5S and 10S.

TUBE-TURN Forged Flanges A complete line of TUBE-TURN flanges is available in sizes ½" thru 42" and in 125-lb thru 2500-lb classes. In addition to carbon steel, TUBE-TURN flanges are furnished in stainless steels, aluminum, intermediate alloy steels and wrought iron. Long welding necks are also available.

The exclusive TUBE-TURN 125-lb forged steel light weight taper face welding neck flange eliminates the necessity for using a higher pressure class of flanges and valves for low pressure service. Furnished in sizes 1" thru 12" and rated at 175 psi WOG.

PIPE-MATE Fittings & Flanges Tube Turns line of PIPE-MATE light-wall stainless steel fittings and flanges provides design

features for greater economy and efficiency in low pressure process piping. PIPE-MATE fittings have extra long tangents which permit direct hook-up to pumps, tanks, vessels, etc., as well as fitting-to-fitting connections or completely flanged fittings.

They may be joined by butt-welding, fillet-welding, brazing or soldering, using normal procedures for these methods, or rolled-in flanged connections may be made employing the unique PIPE-MATE rotating joint flange.

PIPE-MATE fittings and flanges are available in ½" thru 4", Schedules 5S and 10S, and Type 304L, 316 and 316L.

Bellows Expansion Joints The TUBE-TURN bellows expansion joint is another outstanding example of Tube Turns' application of its piping know-how and long manufacturing experience. Based on the results of an extensive test program which evaluates the interrelation between traverse, pressure and cyclic life, TUBE-TURN bellows expansion joints are rated for assured cyclic life. Available in sizes 3" thru 30" reinforced and unreinforced series, the TUBE-TURN bellows expansion joint is furnished in a variety of convolutions and end details. Also available: expansion compensators in sizes ½"-2", and pipe alignment guides.

Available Everywhere! TUBE-TURN Welding Fittings and Flanges are stocked by and sold exclusively through authorized distributors located in every principal city or trade area in the U.S., Canada, Latin America and abroad. Catalogs and technical bulletins on all TUBE-TURN products are available upon request. You will find the following bulletins of special interest... write today.
