Office of the President
Penn Poly Corporation
Route 611
Mount Bethel, Pennsylvania 18343

Dear Customer:

It is our understanding that you are using Aroclor® 1254 in a cleaner application.

You have received our letter dated February, 1970 alerting you to the allegations that certain polychlorinated biphenyls (PCBs) are environmental contaminants. More recent publicity on PCBs had indicated that their use in certain applications may be unwise. In view of this, we are discontinuing the sale of Aroclor 1254 for cleaner application effective June 1, 1970. After this date, no shipments will be made for this application.

Recognizing that this action may cause you some inconvenience, we are taking the liberty of suggesting Santicizer 148 as a possible replacement. Attached is a technical bulletin O/PL-351 on the product. We are also taking the liberty of sending a sample of Santicizer 148 so that you can carry out an evaluation. If you have any technical questions, the regional manager, Mr. R. N. Brell of our Wilmington office, will be happy to assist you.

Very truly yours,

W. E. Schalk
Director of Sales
Plasticizers
