FROM Warren McNab

SUBJECT Literature Summary on Asbestos,
1961-1965

COPIES

REFERENCE

It would appear, from this presentation, that we have a much more serious problem here than we have in any area I know of at present.

My plan at present, with your approval, is to make a study of the operation at No. 2 Cell Room as far as handling, possible exposure, etc. Follow-up will be for dust in air. I have a method of analysis (dust count) that was given in Pittsburgh last month. I shall have to determine the type of fiber we use: it will probably be the worst kind.

I would like a copy of this to go to Paul Burchfield who wants to send it to a customer, K. W. Mesche, Central Research Laboratories, The Mead Corporation, Chillicothe, Ohio. Paul will send it if we send him a copy.

I don't know if we should alert Geismar immediately or wait until our study is farther along.

You might want a copy for Dr. Gold or Ed Laubusch, I don't know. Most people probably have this sort of thing.
