the asbestos aerosol?

A Yes, exactly. What we have, for example, you see this fiber right here?

Q Yes, sir.

A Okay. That is this little guy right here. Okay?

Q So you have taken us down and magnified it.

A Yes. This one right here I am blowing up for you here. Okay?

Now, the issue here is that you have to understand is that there are large numbers of fibers that can penetrate these airways, go passed the airways and get down right onto the surface. Very quickly. This is during the first hour of exposure.

Do you see this first group of animals was exposed for an hour, we get the animals out, give them an overdose of the anesthetic, they go to sleep, we dissect them, put them under the microscope and there are the fibers during the first hour of exposure.

Now, the key here is what happens to those fibers once they land. If they all get carried back
