SUBJECT: Molybdenum Corporation of America
Questa, New Mexico

Dear Mr. Lopez:

This letter concerns our conversation about the conversion of the subject heat transfer unit from Therminol FR to Therminol 55.

Literature on Therminol 55 is enclosed. We are arranging for forty (40) drums of Therminol 55 to be sent to your attention. You should drain the Therminol FR from your system thoroughly--this means removing all of the FR fluid. Therminol 55 can then be added and operation of the system resumed.

We would like to remind you that Therminol 55 is not classified as a fire resistant heat transfer fluid. Consequently, you may wish to consider the use of protective devices to minimize any added fire risks. We suggest that the customer consult with the insurer of his property relative to this matter.

Also enclosed are labels to be placed on the containers of drained FR fluid for return to the address shown. We will pay the return freight. Should you have any sealed containers of new Therminol FR please return them for full credit and mark them clearly "Return for Credit."

Your cooperation is appreciated.

Very sincerely yours,

James J. Roder
Product Supervisor
Heat Transfer Fluids
