PLANT TRAILER MOVES

An evaluation of 1982 plant trailer moves was made from information on the Trailer Switch Logs. A "trailer switch" generally refers to the movement of two trailers as a pair - one from the dock to the field and one from the field to the dock. For purposes of this evaluation a "trailer move" refers to the movement of one trailer from the dock to the field or vice-versa.

A total of 1158 trailers were moved at a cost of approximately \$45000. On the average, five trailers were moved each day at a cost of \$38 each.

A frequency tabulation by number of trailer moves per day is attached.
