Attendees of the June 29, 1989 VI Meeting*

RE: OSHA Final Air Contaminant Standard - EDC

On January 26th, I received a telephone call from Bob Adams of Oxychem alerting me to the publication by OSHA of its final rule amending the exiting air contaminant standard (see Federal Register of January 19, 1989). Relative to EDC, the final rule **established** a PEL of 1 ppm TWA, with a 2 ppm STEL. The effective date of the final rule is March 1, 1989, with a start-up date for compliance with any combination of controls of September 1, 1989. The two pages summarizing the comments relative to EDC are attached for your reference. This material includes references to the comments submitted by the VI on July 21, 1988.

On January 26th, I asked Peter del la Cruz to explore the options. Immediately following this memo is Peter's analysis of the options to be considered. Please review this material and advise of your position by returning the attached letter ballot by February 7, 1989.
