Dear Ed:

Under separate cover I am sending the samples of terphenyls which you requested.

The para terphenyl has been purified and run by V.P.C. There were no impurities found in this material.

The sample of ortho terphenyl, which I am sending, is one that was analyzed by V.P.C. and the trace impurities are recorded on the label.

We do not have any meta terphenyl that has been analyzed, so, I am sending regular plant production material. This usually is 97 to 99 per cent pure material.

I hope this will be satisfactory for your needs. If any more samples are required, please let me know.

George E. Jones
