

PITTSBURGH CORNING CORPORATION

INTER-OFFICE CORRESPONDENCE

To Mr. E. W. Holman

From G. S. Gregory

Subject Plant d

Date June 24, 1971

The attached is one of the possibilities we have anticipated. We would have trouble meeting the requirements under normal circumstances. We are in much worse shape now because the lack of long fiber has built up enormous piles of scrap which literally fill the plant.

They have some long fiber and are trying to gain on the scrap. The chances of doing it in a month or two appear slim. I cannot conceive of a satisfactory answer, unless durable, waterproof bags might be found to permit safe storage outside. Even that would just put us back in the condition we were when the state ran tests.

If the state men visit in the meantime I think they would very likely declare the plant to be an eminent danger and exercise their authority to close.

I sent a copy of the attached to Paul Martha and we discussed the matter some when Bill and I met with him on June 22.

Since Carl is away, I discussed this with Bill Williams so that he is aware of it. If he can figure any move which will help, I am sure he will act.

I hope I am overstating the situation, but do not think so.
