PFAS WP7 (SEA)

CA meeting 24_3_2021

1. Opening and adoption of the agenda

2. Thought starters:

How to tackle proportionality with large data gaps?

- Lessons learned from other PBT dossiers
 - Microplastic dossier ([REDACTED])
 - PFHxA ([REDACTED])
 - From a SEAC member perspective ([REDACTED])
- Requirements according to guidance documents ([REDACTED])

3. Discussion: How to tackle proportionality with large data gaps?

4. Thinking sessions Argumentenfabriek ([REDACTED])

3. Discussion questions

How to tackle proportionality with large data gaps?

- 1) **How** to get to an overall proportionality assessment assuming many different individual uses, and large data gaps on the side of cost and/or risk reduction capacity for some of these?
- 2) **What** are lessons learned and what are the challenges we see based on the PFHxA and the microplastic dossiers?
- 3) **What** is the minimum information needed for the proportionality assessment?
 - Do we need to know all info for all (sub)uses? (in case of derogation)
 - How to proceed with data gathering for the SEA?
- 4) **What** is the logic of proportionality in the absence of data – can we as a group discuss a logic?
