BRISTOL-MYERS PRODUCTS
A DIVISION OF BRISTOL-MYERS COMPANY

225 LONG AVENUE
HILLSIDE, NEW JERSEY 07207
TELEPHONE 201-923-5000

November 18, 1974

To: CTFA Talc Subcommittee Members:

There will be a meeting of the CTFA Talc Subcommittee on Wednesday, December 4, 1974 at 10:00 A.M. in the Bristol-Myers Technical Services Conference Room on the second floor of the building designated on the map shown on the reverse side, and located at 225 Long Avenue, Hillside, N. J. When you arrive, you may park in the lot directly across the street, or if no space is available, in the lot further down the street at Long Avenue and Broadway Avenue. When you enter lobby of building, sign pad and then dial #675 for instructions.

Attached for your information is a report by Dr. Rolle which will be discussed at the meeting. Our main consideration will be to decide whether we should propose the 1% limit for chrysotile and amphibole minerals in talc using DTA and x-ray diffraction without any back-up method. This is based on the judgment that no presently used cosmetic talc will give a false positive for chrysotile by DTA.

Please advise me as soon as possible whether or not you will be able to attend.

George W. Sandland
Chairman of CTFA Talc Subcommittee
