J. Anderson - Hillsboro, 257

Per our conversation back in May, I am sending you sections from 10 air sample filters. These samples were picked at random from the survey taken in May.

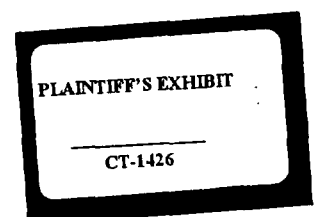

Each filter slice is contained in a numbered petri dish. It is necessary to make sure each sample is mounted right side up on the slide--right side up being the side facing up when the lid containing the number is facing up.

I am interested in learning of your counts for microscope and method comparison. Also, in talking with Jack Anderson on June 3, I requested that the Boring Mill and large coupling saw be resampled. Please send me those results as they will be included in my final report.

If you have any questions, please feel free to contact me.

JW/ejb

Enclosures: Sample - #694, #711, #736, #738, #759, #764, #770, #777, #785 and #789.
