Subject:

ASBESTOS FIBER SURVEY

Your Asbestos Survey Report and study have been reviewed, and appropriate action has been taken to eliminate the excessive employee exposures noted.

As you are aware, the problem at ~~the~~ #1 Bipel was caused by a ~~change in the exhaust ventilation system~~. All ~~bipels~~ have now been fastened for all Bipels to prevent a similar occurrence. Subsequent employee air samples (2 and 3, as indicated on your study) now indicate adequate dust control.

The ~~center~~ in the R&D Laboratory has been ~~removed~~ and will not be used, thereby eliminating this source of excessive employee exposure. Employees involved in the noted intermittent excessive exposures have been ~~examined~~ and scheduled for appropriate physical examinations with X-rays.
