Robert A. Kehoe, M.D.
Kettering Laboratory of
Applied Physiology
Cincinnati, Ohio

Dear Dr. Kehoe:

At the present time I am contacting certain leaders in the field of industrial medicine relative placement in civilian industry and on the advice of such personnel on the West Coast, I am taking the liberty of writing you.

I have recently completed five year's service with the army and am now on terminal leave and, as may be seen on the attached biographical sketch, most of this service has been in industrial medicine at the San Francisco Port of Embarkation (under the direction of Dr. A. J. Lanza) and during overseas service in the Philippine Islands and Japan. I am intensely interested in the field and desire to make this specialty my life work. Perhaps the best description of the work that has been done may be seen in the article describing our Port activities in the November issue of "Industrial Medicine".

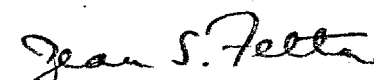

Any position in civilian industry that embraces both medical care and industrial hygiene programs would be greatly desired wherein one could serve in an administrative capacity, possibly as medical director. In view of your knowledge of industry and various medical department programs in connection therewith, we are asking your advice and recommendations as to where the best possibilities for such placement may exist.

The following names may be submitted as references:

A. J. Lanza, M.D.
W. P. Shepard, M.D.
Henry H. Kessler, M.D.
Rodney R. Beard, M.D.
Stanford University, San Francisco
Mr. Bert Hanman
War Manpower Commissioner, San Francisco

Any help or information you may have would be greatly valued.

Very cordially yours,

JEAN S. FELTON, M.D.
