H. L. Williams - ANNISTON

Mr. Cumming Paton
CPATO

I have read through Mr. Miller's memorandum of September 30. I am not a chemist and so am unable to find out whether these questions have answered the objective of the PDA.

However, I do not see whether or not we are able to analyze for the presence of chlorinated biphenyl in chlorinated terphenyl. This is the question that was asked by the FDA and unless we can show them such a method, we had better withdraw our petition without prejudice.

R. Emmet Kelly, M. D.
