To All Of Our Customers:

The following is written to protect you, our customer, from unknowingly using cold process roofing and waterproofing products that are illegal.

The Environmental Protection Agency, as well as state and municipal laws, strictly limit the use of "non-exempt" solvents in asphaltic products. These illegal "non-exempt" solvents are photochemically reactive - that is, sunlight changes their chemical structure. They become irritants for the eyes and for the entire breathing system.

Illegal products containing "non-exempt" solvents beyond regulated limits are being offered for sale at so-called bargain prices.

You and your customers are both liable for the sale and the use of such materials.

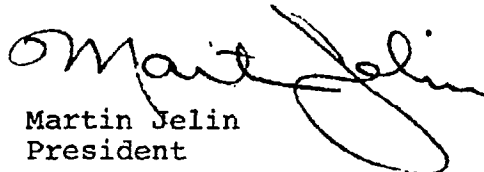

The law states "no person shall sell, offer for sale or purchase any architectural coating containing a photochemically reactive solvent..." And, further, by Federal Regulation, not only the sale, but the use of coatings containing "non-exempt" solvents beyond specific limits are prohibited.

You have a right and an obligation to ask your suppliers if their products are manufactured with complying, or legal materials.

Karnak Chemical Corporation assures you that all of its products comply with environmental regulations, as they always have.

Please do not hesitate to contact us if you desire further information.

Very truly yours,

Martin Jelin
President
