

LINE: RAYLOC STANDARD QUALITY CALIPERS

PRODUCT: DISC BRAKE CALIPERS

---

DIFFERENCES vs PREMIUM: The primary differences are in the appearance of the caliper and how the products are treated and prepared during the remanufacturing process. The premium line, Professional Quality 42, calipers are dipped in a high-grade rust preventative insuring a like new appearance and a casting free from contaminants, rust, and dirt. All new seals, dust boots, and hardware are used in both lines. The premium units receive new bleeder screws. Standard Quality calipers include salvaged steel and phenolic pistons that meet specifications. Professional Quality salvaged pistons are polished to a smooth finish for maximum sealing ability. The premium line bleeder and brake hose ports are cleaned and rethreaded.
