Mr. Kehoe
Kettering Laboratories,
Cincinnati, Ohio

Dear Mr. Kehoe:

We have a patient who has had lead poisoning from mixing white paint. He got better about 6 months ago on sodium citrate therapy and his blood count is now normal, but he continues to have many aches and pains. I have been informed that you have been interested in this problem and thought maybe you might have some suggestions regarding therapy.

Sincerely yours,

Charles E. Jackson, M.D.
