Mr. J. A. Keller, Supervisor  
Personnel Services Department  
Research and Engineering Center

Subject: Evaluation of Asbestos Worker Exposure, Brake Research Unit,  
Scientific Building

As requested, an industrial hygiene study was conducted to evaluate worker exposure to asbestos dust in the Brake Research Unit located at the Scientific Building, Research and Engineering Center. The results of the air samples taken are contained on the attached data sheet.

The operations carried on in the Brake Research Unit include the weighing and compounding of dry asbestos and cutting, filing, and abrasion wear testing of the compounded asbestos brake lining material. These operations are of an intermittent nature and are carried out in four separate rooms. Only one of these rooms is equipped with process exhaust ventilation, while the other rooms have normal building general ventilation. Although local exhaust is present in the room where weighing and compounding are carried on, it is not being utilized for the operation.

The air samples taken were evaluated considering the present threshold limit value of five mppcf and the lower level of two mppcf listed by the American Conference of Governmental Industrial Hygienists as an intended change of the TLV for asbestos dust. As can be seen from the data, all samples are within acceptable limits.

Because of the apprehension exhibited by the employees toward their exposure to asbestos, it is our opinion that modification which involve little or no expense are justified. These modifications include moving the balance in the weighing and compounding room to an area where existing flexible local exhaust ducts could be placed proximal to the balance while weighing. This same procedure could also be used for the mixer used in compounding. The last modification would consist of cleaning the work bench used in the cutting and filing operation with a vacuum cleaner rather than blowing it clean with an air hose.

If there are any questions, or if we can be of further assistance, please do not hesitate to contact us.
