At 3:00 PM on October 9, 1981, I notified the National Response Center of the VCM release that occurred at approximately 11:00 AM on October 9, 1981. The release was caused by the overpressure of a section of line by an unloading compressor. Attached are:

- (1) The list of questions that I was asked by the National Response Center and my response to each question.
- (2) A report completed by J. Bello, temporary shift supervisor, outlining the events leading up to the release.
- (3) Documentation of the basis for estimating the size of the VCM release.
