

INTER-ORGANIZATION MEMO

TO: AKRON - ~~NOT JOHNSON~~
ATTENTION: H. E. JEWETT, R. W. LAUNDRIE
FROM: ASHTABULA
DATE: DECEMBER 22, 1983
SUBJECT: UPCOMING PLANT VISIT
JANUARY 23-24, 1984

Per our phone conversation, I have contacted respective plant personnel about the aforementioned Monday and Tuesday plant visit by R. W. Laundrie, L. Beliczky, Dr. Alcorn and yourself. Unless you indicate otherwise, it is felt an agenda like the following may be quite appropriate.

- MONDAY
1. Travel to Ashtabula
 2. Short Meeting - L. Beliczky with Union Committee
 3. Introductory Meeting with Union/Management Team, Safety Committee and Visitors
 4. Plant Tour with All Parties
 5. Dinner and General Discussion
- TUESDAY
1. Morning Meeting with Interested Employees
 - a. Brief talk by Each Visitor, followed by,
 - b. Panel Discussion to Answer Questions
 2. Open

A survey will be used to generate some questions and areas of concern. Here is a sample of what items should be discussed by the visitors in order to cover the general areas.

1. General discussion of angiosarcoma - symptoms, normal end result, etc.
2. What new things have surfaced in recent years about VCl exposure and angiosarcoma?
3. Is there a "best" approach to treatment of angiosarcoma?
4. What is the proper course of action for an individual who has been detected to have angiosarcoma?
5. This facility has one reported case with the tests showing no results which would suggest angiosarcoma. Does our screening system need to be modified; or, is it the best we can expect?
6. Are there other organs or parts of the body that can be affected by vinyl chloride of which we should be aware?

7. Will there be any side effects - psychological or otherwise - which are to be expected with an affected employee or family? What is the recommended action to deal with this?
8. Are there increasing pressures to revise the standard to further reduce the possibilities of exposure?
9. What are the "best" ways to avoid angiosarcoma?
10. Are there more concerns with women working in this plant environment than men?
