RE: ASBESTOS

Ref: Engineering Standard

This will confirm a meeting to discuss the captioned on Wednesday, November 3rd at 9:00 a.m. in the Medical Library, Room 652 of the Alcoa Building.

One of the topics of discussion at this meeting will be our need for an Asbestos Engineering Standard. I have prepared and attached a rough draft outlining procedures involved in removal of asbestos-containing products to initiate our discussion in this area. Other topics to address at the meeting include the status of the proposed Removal of Refractory Linings in Aluminum Melting and Holding Furnaces (Engineering Standard 26.1.7), and other potential asbestos exposures, for example, during application of masonry paints.
